## Planetary Pasta Rovers How Fast Does Your Rover Travel?

| Rover 1 |  | Distance (d in cm) | Time (t in sec) | Rate (d/t) |
| :--- | :--- | :--- | :--- | :--- |
|  | Trial 1 |  |  |  |
|  | Trial 2 |  |  |  |
|  | Trial 3 |  |  |  |
|  | Average |  |  |  |
| Rover 2 |  |  |  |  |
|  | Trial 1 |  |  |  |
|  | Trial 2 |  |  |  |
|  | Trial 3 |  |  |  |
|  | Average |  |  |  |

What is your first rover's rate in miles per hour? $\qquad$
What is your second rover's rate in miles per hour? $\qquad$
Is your faster rover the better performer? Why or why not?

In addition to distance traveled and rate of travel, what other factors contribute to a good rover? $\qquad$

If you could build another rover and had an unlimited budget, how would it differ from your first two rovers?

Make a sketch of a third rover:
