

What year and month does your data set begin?
What year and month does your data set end?
What is the global mean sea level (GMSL) at the beginning of your data set?
At the end?
What is the difference?
What does the GMSL indicate is happening to sea level across the span of your data?
Add a trendline to your data. Does the trendline agree with your visual assessment of the data? If there is a discrepancy, why do you think that is?
How does your data set compare to the complete 130-year data set? Does your data set show the same trend as the long-term trend? If not, why do you think it is different?
