

What year and month does your data set begin? _____

What year and month does your data set end? _____

What is the global mean sea level (GMSL) at the beginning of your data set? _____

At the end? _____

What is the difference? _____

What does the GMSL indicate is happening to sea level across the span of your data?

Add a trendline to your data. Does the trendline agree with your visual assessment of the data? If there is a discrepancy, why do you think that is?

How does your data set compare to the complete 130-year data set? Does your data set show the same trend as the long-term trend? If not, why do you think it is different?
