55 Cancri e

lava life

Skies sparkle above a never-ending ocean of lava

A global ocean of lava under sparkling, silicate skies reflecting the lava below: what better choice for an earthy vacation? Planets Janssen, or 61 Cancri e, within a star called Copernicus only 41 light years away. The molten surface is completely uninhabitable, but you'll ski safely above, taking in breathtaking views: the burning horizon, Janssen's sister planet Galifi hanging in a dark sky, and curtains of glowing particules as you glide across the terminator to Janssen's dark side. Book your travel now to the hottest vacation spot in the galaxy, 61 Cancri e.
